PROFESSIONAL SUMMARY

Backend-focused Laravel Developer building secure, production-grade web applications with PHP, MySQL, and RESTful APIs. Comfortable owning features end-to-end — from database schema and Eloquent modeling to API design and front-end integration via JavaScript/AJAX. Has shipped containerized services using Docker, Redis, and Nginx, and worked with cloud storage (Azure Blob) and AI microservices in applied projects. B.E. in Computer Science with a solid grounding in OOP, MVC architecture, and the SDLC.

CORE SKILLS

- **Backend & API Architecture:** Laravel 12, PHP, RESTful API Design, MVC Architecture, Eloquent ORM, Laravel Sanctum (Auth), Blade, Artisan CLI
- **Databases & Data Modeling:** MySQL, PostgreSQL, SQLite, Schema Design, Query Optimization
- **Infrastructure & DevOps:** Docker, Nginx, Redis, Linux, Git/GitHub
- **Frontend Integration:** JavaScript, AJAX, jQuery, React.js, Bootstrap, Tailwind CSS, HTML5/CSS3
- **Engineering Practices:** Agile/SDLC, Code Review, API Integration, Version Control

PROFESSIONAL EXPERIENCE

Simform Software LLP — Trainee Engineer

Jan 2026 – Jul 2026

Ahmedabad, Gujarat

- Developed 2–3 backend modules and RESTful API endpoints for production web applications using PHP, Laravel, and MySQL, enabling secure CRUD operations consumed by front-end and mobile clients.
- Collaborated with cross-functional engineering team in an Agile workflow, resolving up to 10 bugs and contributing feature branches and code reviews across sprint cycles using Git/GitHub.
- Integrated JavaScript/AJAX-driven front-end components with Laravel backend logic, converting full-page form submissions to asynchronous requests to reduce reload interruptions in user-facing workflows.
- Deployed and validated Laravel applications in Linux-based environments, enforcing MVC architecture and code-review checkpoints ahead of production releases.

PROJECTS

AMRV — AI-Powered Medical Report Vault

Laravel 12, PostgreSQL, Flask, Docker, Redis, Nginx

- Architected secure RESTful APIs using Laravel 12 and Laravel Sanctum authentication to manage user profiles, medical reports, real-time chat, and notifications.
- Built encrypted medical-report storage pipeline using Azure Blob Storage integrated with Flask-based AI microservices for automated report summarization and health-metric extraction.
- Deployed containerized architecture with Docker, Nginx, PostgreSQL, and Redis, implementing background job queues to support scalable healthcare workflows.

Society Management System

Laravel 12, MySQL, JavaScript, Bootstrap, AJAX

- Built full-stack society management platform with role-based access control for Super Admin, Admin, Resident, and Gatekeeper roles using Laravel and MySQL.
- Developed real-time visitor pass management, complaint tracking, and delivery management modules with AJAX and JavaScript, streamlining front-desk operations.
- Designed responsive UI with Bootstrap and DataTables and implemented webcam-based visitor photo capture to strengthen access security.

Course Management System

PHP, MySQL, JavaScript, Bootstrap, AJAX

- Built full-stack course management platform with role-based authentication for Admin, Instructor, and Student user types using PHP and MySQL.
- Implemented CRUD-based modules for course, enrollment, and assignment tracking with real-time AJAX interactivity.
- Designed responsive, cross-device UI using Bootstrap to improve accessibility and user experience.

EDUCATION

Gujarat Technological University — B.E., Computer Science and Engineering

Graduated May 2026

CGPA: 8.66

Gujarat Technological University — Diploma in Computer Engineering

Graduated May 2023

CGPA: 8.34

CERTIFICATIONS & ACHIEVEMENTS

- PHP Certification, Programming Hub (Google Developer Launchpad) — 30-hour certification covering server-side development, MySQL integration, and dynamic web application development.
- AU Hackathon 2025 — Built FinFlow, an AI-powered financial dashboard with blockchain-based identity verification using React, Vite, Tailwind CSS, and JavaScript; ranked Top 25 of 100 teams.
